Description of the security update for SharePoint Enterprise Server 2013: February 8, 2022 (KB5002120)

This security update resolves a Microsoft SharePoint Server remote code execution vulnerability and Microsoft SharePoint Server spoofing vulnerability. To learn more about the vulnerabilities, see the following security advisories:

Microsoft Common Vulnerabilities and Exposures CVE-2022-22005

Microsoft Common Vulnerabilities and Exposures CVE-2022-21987

Description of the security update for SharePoint Enterprise Server 2013: February 8, 2022 (KB5002147)

This security update resolves a Microsoft Excel information disclosure vulnerability. To learn more about the vulnerability, see Microsoft Common Vulnerabilities and Exposures CVE-2022-22716.

Description of the security update for SharePoint Foundation 2013: February 8, 2022 (KB5002155)

This security update resolves a Microsoft SharePoint Server security feature bypass vulnerability. For more information about the vulnerability, see Microsoft Common Vulnerabilities and Exposures CVE-2022-21968.

Description of the security update for SharePoint Enterprise Server 2016: February 8, 2022 (KB5002136)

This security update resolves a Microsoft SharePoint Server remote code execution vulnerability, Microsoft SharePoint Server spoofing vulnerability, and Microsoft SharePoint Server security feature bypass vulnerability. To learn more about the vulnerabilities, see the following security advisories:

Microsoft Common Vulnerabilities and Exposures CVE-2022-22005

Microsoft Common Vulnerabilities and Exposures CVE-2022-21987

Microsoft Common Vulnerabilities and Exposures CVE-2022-21968

Description of the security update for SharePoint Server 2019: February 8, 2022 (KB5002135)

This security update resolves a Microsoft SharePoint Server remote code execution vulnerability, Microsoft SharePoint Server spoofing vulnerability, and Microsoft SharePoint Server security feature bypass vulnerability. To learn more about the vulnerabilities, see the following security advisories:

- [Microsoft Common Vulnerabilities and Exposures CVE-2022-22005](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2022-21987](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2022-21968](#)

This security update contains improvements and fixes for the following nonsecurity issues in SharePoint Server 2019:

- Fixes an issue in which you cannot check user permissions by using the **GetTokenGroupsForUser** method if the user is in a different domain than the group domain.
- Fixes an issue in which the property restriction type of search queries that uses the equal operator (such as **title=R123**) no longer returns search results.
- Fixes an issue in which you receive a wrong error message that states "cannot check retention policy on this site" when you configure retention policy on the web application that doesn't have a policy center site collection. The error message should say "Policy center does not exist."

This security update also contains fixes for the following nonsecurity issues in SharePoint Server 2019. To fix these issues completely, you have to install [KB5002134](#) together with this update.

- Fixes an issue in which the icon is broken when you upload the file item that exceeds the threshold.
- Fixes an issue in which the file URL in the "Shared with Me" modern view points to the publishing farm "my site" instead of to the site from where it is shared in a publishing or consuming scenario across the farm.
- Fixes an issue in which the Quick Links item properties keep referencing the source site document libraries on the target site.
- Fixes an issue in which all other terms of the hierarchy are selected if a subterm is selected when you filter a Managed Metadata Services (MMS)-based column in the modern user experience (UX).

February 8, 2022, update for SharePoint Server 2019 Language Pack (KB5002134)

This update contains the following fixes:

- Fixes an issue in which the icon is broken when you upload the file item that exceeds the threshold.
- Fixes an issue in which the file URL in the "Shared with Me" modern view points to the publishing farm "my site" instead of to the site from where it is shared in a publishing or consuming scenario across the farm.
- Fixes an issue in which the Quick Links item properties keep referencing the source site document libraries on the target site.
- Fixes an issue in which all other terms of the hierarchy are selected if a subterm is selected when you filter a Managed Metadata Services (MMS)-based column in the modern user experience (UX).
