January 8, 2019, update for Project Server 2013 (KB4461606)

Assume that you have selected PEN, AED or other values in the Currency Settings section on the Additional Server Settings page. When you create a project from Project Web App (PWA), you receive a ProjectOptCurrencySymbolInvalid error and the project is not successfully created.

Description of the security update for SharePoint Enterprise Server

2013: January 8, 2019

This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see Microsoft Common Vulnerabilities and Exposures CVE-2019-0558 and Microsoft Common Vulnerabilities and Exposures CVE-2019-0562.

Description of the security update for SharePoint Foundation 2013:

January 8, 2019

This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see Microsoft Common Vulnerabilities and Exposures CVE-2019-0556.

Description of the security update for SharePoint Enterprise Server

2013: January 8, 2019

This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see Microsoft Common Vulnerabilities and Exposures CVE-2019-0585.

Description of the security update for SharePoint Enterprise Server

2016: January 8, 2019

This security update contains the following improvements in SharePoint Server 2016:

- Improves Thai word breaking for more than 10 words.
- Improves Turkish word breaking so that words can be correctly broken in some common cases where they previously were not.

This security update contains fixes for the following nonsecurity issues in SharePoint Server 2016:

- When you use the REpresentational State Transfer (REST) API to query a specific project's queue jobs, the queue jobs collection is not returned.
- This update fixes the following issues that concern Quick Parts:
 - When you insert a SharePoint Library column as a Quick Part in a document that contains double-byte character sets (DBCS) characters in the file name, Word 2016 crashes.
 - If a SharePoint lookup field's name contains a space or other special characters, the text for the field values is not displayed when you insert the information as a Quick Part in a Word document.

This security update contains fixes for the following nonsecurity issues in Project Server 2016:

- If you update both a task's name and **Actual Cost** value through the Client-Side Object Model (CSOM), the task name is lost. Additionally, other fields that were set during the same update are lost.
- You can't get all the details of a dependency link, such as the lag duration and project UID properties, through the Client-Side Object Model (CSOM).
- Assume that you have selected **PEN**, **AED**, or other values in the **Currency Settings** section on the **Additional Server Settings** page. When you create a project from Project Web App (PWA), you experience a "ProjectOptCurrencySymbolInvalid" error, and the project is not successfully created.
