Description of the security update for SharePoint Enterprise Server 2013: July 13, 2021 (KB5001984)

This update fixes an issue in which the Site Aggregator Web Part doesn't add a new tab as expected.

Description of the security update for SharePoint Foundation 2013: July 13, 2021 (KB5001992)

Microsoft Common Vulnerabilities and Exposures CVE-2021-34467

Microsoft Common Vulnerabilities and Exposures CVE-2021-34468

Microsoft Common Vulnerabilities and Exposures CVE-2021-34517

Microsoft Common Vulnerabilities and Exposures CVE-2021-34519

Microsoft Common Vulnerabilities and Exposures CVE-2021-34520

This update contains fixes for the following nonsecurity issues:

Fixes an issue in which PSConfig doesn't start an administrative instance of Microsoft Edge when you try to use SharePoint Server Central Administration.

Fixes an issue in which you can't open the XSL and Parameters editor in Microsoft Edge that's based on Chromium.

Fixes an issue in which SharePoint Designer doesn't create a forms page under a subsite.

Description of the security update for SharePoint Foundation 2013: July 13, 2021 (KB5001996)

This security update resolves a Microsoft SharePoint Server information disclosure vulnerability. To learn more about the vulnerability, see Microsoft Common Vulnerabilities and Exposures CVE-2021-34519.

Description of the security update for SharePoint Enterprise Server 2016: July 13, 2021 (KB5001976)

This security update contains fixes for the following nonsecurity issues in SharePoint Server 2016:

- Fixes an issue in which PSConfig doesn't start an administrative instance of Microsoft Edge when you try to use SharePoint Server Central Administration.
- Fixes an issue in which you can't resolve Portal Super User and Portal Super Reader accounts in a multi-tenant farm.
- Fixes an issue in which you can't open the XSL and Parameters editor in Microsoft Edge that's based on Chromium.
- Fixes an issue in which SharePoint Designer doesn't create a forms page under a subsite.
- Fixes an issue in which the Site Aggregator Web Part doesn't add a new tab as expected.

This security update also contains fixes for the following nonsecurity issues in SharePoint Server 2016. To fix the issues completely, you have to install [KB 5001981](#) together with this update.

- Adds the ability to change the ASP.NET view state decryption and validation keys of a SharePoint Server web application. The **Set-SPMachineKey** PowerShell cmdlet configures and deploys new decryption and validation keys to the servers in the farm. The **Update-SPMachineKey** PowerShell cmdlet deploys decryption and validation keys to the servers in the farm.
- Fixes an issue that affects the bypass list functionality in the search crawler proxy setting. This update also adds Windows-style wildcard support to the bypass list.

This security update also contains fixes for the following nonsecurity issues in Project Server 2016:

- Fixes an issue in which submitted status updates don't appear for approval after you submit a timesheet.

- In the Scheduled Web Part, the **Paste** button doesn't paste the cut or copied task to the grid. Paste by using the keyboard (Ctrl+V) does work as expected. However, cut by using the keyboard (Ctrl+X) doesn't work. Ctrl+X copies the task instead of cutting it.

Description of the security update for SharePoint Enterprise Server 2016: July 13, 2021 (KB5001981)

This article contains the following fix and improvement. To enable this update and fix the issue completely, you have to install [KB 5001976](#) together with this update.

- Adds the ability to change the ASP.NET view state decryption and validation keys of a SharePoint Server web application. The **Set-SPMachineKey** PowerShell cmdlet configures and deploys new decryption and validation keys to the servers in the farm. The **Update-SPMachineKey** PowerShell cmdlet deploys decryption and validation keys to the servers in the farm.
- Fixes an issue that affects the bypass list functionality in the search crawler proxy setting. This update also adds Windows-style wildcard support to the bypass list.

July 13, 2021, update for SharePoint Server 2019 Language Pack (KB5001974)

This update contains the following fixes and improvements. To fix these issues completely, you have to install [KB 5001975](#) together with this update.

- Adds the ability to change the ASP.NET view state decryption and validation keys of a SharePoint Server web application. The **Set-SPMachineKey** PowerShell cmdlet configures and deploys new decryption and validation keys to the servers in the farm. The **Update-SPMachineKey** PowerShell cmdlet deploys decryption and validation keys to the servers in the farm.
- Fixes an issue where you can't find the **Apply** button when trying to add columns to list views by using **Show/hide columns** in a document library.
- Fixes an issue in which the Highlighted content web part doesn't work in a subsite if the user has no permissions to the root site.

- Fixes an accessibility issue in which there's no method to skip or bypass repetitive content.
- Fixes an accessibility issue in which there's no feedback provided for unfollowing a site successfully.
- Fixes an accessibility issue in which screen readers don't read the drop-down functionality of the **Search this site** field as combo boxes in classic sites.

Description of the security update for SharePoint Server 2019: July 13, 2021 (KB5001975)

This security update contains improvements and fixes for the following nonsecurity issues in SharePoint Server 2019:

- Fixes an issue in which My Sites creation takes a long time in a non-default zone.
- Fixes the "Processing this item failed because the parser server ran out of memory" error that occurs when you crawl for some kind of files.
- Fixes an issue in which PSConfig doesn't start an administrative instance of Microsoft Edge when you try to use SharePoint Server Central Administration.
- Removes some unnecessary "5538" events in the Windows System event log.
- Fixes an issue in which the "Link to a Document" content type can't navigate to the requested resource if both "#" and "?" exist in the URL.
- Fixes an issue in which a wiki page can't be displayed in a dialog box in SharePoint classic UI.
- Fixes an issue in which SharePoint Designer doesn't create a forms page under a subsite.
- Fixes an issue in which the Site Aggregator Web Part doesn't add a new tab as expected.

This update also contains improvements and fixes for the following issues. To fix these issues completely, you have to install [KB 5001974](#) together with this update.

- Adds the ability to change the ASP.NET view state decryption and validation keys of a SharePoint Server web application. The **Set-SPMachineKey** PowerShell cmdlet configures and deploys new decryption and validation keys to the servers in the farm. The **Update-SPMachineKey** PowerShell cmdlet deploys decryption and validation keys to the servers in the farm.
- Fixes an issue where you can't find the **Apply** button when trying to add columns to list views by using **Show/hide columns** in a document library.

- Fixes an issue in which the Highlighted Content Web Part doesn't work in a subsite if the user has no permissions to the root site.
- Fixes an accessibility issue in which there's no method to skip or bypass repetitive content.
- Fixes an accessibility issue in which there's no feedback provided for unfollowing a site successfully.
- Fixes an accessibility issue in which screen readers don't read the drop-down functionality of the **Search this site** field as combo boxes in classic sites.
