Description of the security update for SharePoint Enterprise Server 2013: May 12, 2020 (KB4484352)

This security update contains a fix for the following nonsecurity issue:

- Image uploads fail in SharePoint Server 2013 site feeds when the SharePoint Server 2013 farm consumes a User Profile service application from a SharePoint Server 2016 farm.

[Description of the security update for SharePoint Foundation 2013: May 12, 2020 \(KB4484364\)](#)

This security update fixes an issue that prevents the FedAuth cookie from being deleted on Chrome 80+ browsers.

[May 12, 2020, update for SharePoint Foundation 2013 \(KB4484368\)](#)

This update improves translations for multiple languages versions of SharePoint Foundation 2013.

[Description of the security update for SharePoint Server Enterprise 2016: May 12, 2020](#)

This security update contains improvements and fixes for the following nonsecurity issues in SharePoint Server 2016:

- Changes the "Scheduled Start Date" and "Scheduled End Date" fields in a publishing page to format the date field according to the correct locale.
- Updates SharePoint search crawler to send GET requests by using HTTP 1.1 if the HTTP 1.0 requests fail.
- Updates the Search word breaker to tag IP addresses and GUIDs as named entities for all languages except Korean.
- Fixes an issue in which axis values may be truncated when you use SharePoint Server 2016 to convert a file that contains charts to PDF.
- Fixes the HTTP 404 response error when you access site collections in newly created or mounted content databases.
- Consider the following scenario:
 - You have a web application that uses Windows claims authentication only.
 - You create an Active Directory (AD) user that has a mail account name that's not the same as the user principal name (UPN), and the AD user doesn't exist in the UserInfo list.
 - You create a new team site and also create a custom list that has a "person" field.
 - You use the Quick Edit mode to set the person field to the AD user.

In this scenario, the AD user isn't validated.

[May 12, 2020, update for SharePoint Server 2019 Language Pack \(KB4484331\)](#)

This update contains the following fixes:

- Fixes an accessibility in which where focus is trapped in the **Close** button in the **Share** dialog box when you navigate by using screen readers.

- Fixes an issue in which anonymous users are unexpectedly prompted for credentials when they use the modern experience in SharePoint sites that allow anonymous access. This includes modern Team sites and Communication sites.
- Fixes an issue in which the screen readers cannot detect the people field or required flag of modern pages.
- Fixes an issue in which screen readers cannot read the required flag in the modern document library folder creation experience.
- Fixes an issue for choice fields in the modern list experience. After a value is set for a choice field, users cannot overwrite that value with a blank value, even if the field doesn't require a value.
- Fixes an issue that occurs when you navigate between modern pages through in-app transition. If the URL contained the "?#" character sequence, the "?" is removed from the navigated page URL. This can affect how web frameworks render the page.

Note To fix these issues completely, you must install [KB4484332](#) together with this update.

[Description of the security update for SharePoint Server 2019: May 12, 2020](#)

This security update contains improvements and fixes for the following nonsecurity issues:

- Fixes an issue in which the arrowhead symbol that signifies an additional fly-out shortcut menu disappears or appears incorrectly on the **Advanced** option on a task callout that's found in a SharePoint task list.
- Fixes an issue in which site creation fails if only Security Assertion Markup Language (SAML)-based authentication is enabled.
- Fixes an issue that prevents images from appearing in modern News posts and Pages if the site collection is using the Turkish language.
- Fixes an issue in which the **Copy To** function doesn't work for folders that contain .vol files larger than 4 GB in size.
- Fixes the issue that causes list totals to be misaligned while displaying sum total.
- To improve accessibility, fixes the following issues:
 - Always use "all documents" as aria-label for the first view on the **View Selector** menu.
 - **View Selector** items specify a non-existent "view" role and aren't correctly recognized by screen readers.

This update also fixes the following issues. To fix these completely, you must also install [KB4484331](#) together with this update:

- Fixes an accessibility issue in which focus is trapped in the **Close** button in the **Share** dialog box when you navigate through screen readers.
- Fixes an issue where anonymous users are unexpectedly prompted for credentials while using the modern experience in SharePoint sites that allow anonymous access. This includes modern Team sites and Communication sites.
- Fixes an issue where the screen readers are unable to detect the people field or required flag of modern pages.
- Fixes an issue where screen readers cannot read the required flag in the modern document library folder creation experience.
- Fixes an issue that affects choice fields in the modern list experience. After a value is set for a choice field, users cannot overwrite that value by using a blank value, even if the field doesn't require a value.
- Fixes an issue that occurs when you navigate between modern pages through in-app transition. If the URL contained the "?#" character sequence, the "?" is removed from the navigated page URL. This can affect how web frameworks render the page.
